

Issue 1 - May 2019

Mr Plant Hire plc

Company Newsletter

Introduction

It has been a great start to the year so far. We are only 5 months in and already off to a flyer. It's time we start to let people throughout the industry know what is happening in each of our divisions. Throughout this newsletter we're going to show you a snippet of each of the divisions and inform you on what is new, and any changes that have happened.

First of all we said goodbye to our leader Mr Dave Elsdon, the man who created the company that we all work for. We had a great send-off for Dave at the Christmas party and we wish him all the best for his future endeavours (Even though he still keeps coming by asking for stuff ... Apparently we can't get rid of him after all).

Powered Access

With the long awaited opening of their new depot it has been an extremely busy start to 2019 for the Powered Access Division. The brand new modern offices added the new refresh that was needed and everyone is happy with the final result. We now have 1.1 acres of land, state of the art wash down bays and a newly built mezzanine floor within our new workshop which is 15m (L) x 12m (W). We have also added a large quantity of new stock to our Powered Access fleet. We welcome the new range of Manitou products.

Powered Access

The Manitou 160 ATJ articulated platform is most suited to work outdoors on uneven or sloping ground. A capacity of 230kg, an up and over clearance of 7.38m and a working height of 16m provides the operator with a large working area.

The Manitou 160 ATJ+ diesel-powered articulated platform has a load capacity that is unique on the market: 400kg. It can hold 3 operators and up to 160kg of material. It has an up and over clearance of 7m and provides a working height of up to 16.25m and a horizontal outreach of more than 10m.

280 TJ

- Working height: 28m
- Max. outreach: 21.45m
 - S.W.L.:
350kg (3 pers.) or 240kg (2 pers.)
- Diesel engine 45HP
- Continuous rotation
 - Oscillating axle
- Simultaneous movements
 - 4 wheel drive
 - 4 wheel steer
 - Crab steer
 - On Board Generator

The 120 AETJ

Because making the best use of space is becoming more and more important, Manitou has produced the 120 AETJ.

The 120 AETJ is a compact electric articulating boom (working height 12m), specially designed for all your maintenance and logistical operations.

Very compact with an overall width of only 1.2m and a stowed height of less than 2m enables the 120 AETJ to access any building fitted with standard doorways.

The ManGo 12 aerial work platform is a new concept in platforms, combining the benefits of both articulated and telescopic platform. Originally designed for rental operators, it's also perfectly suited to professionals who need to get people up to 12m in height for construction applications as well as industry professionals.

Mechanical & Electrical

Over the last 6 months we have invested in a large quantity of Butt Fusion Welders. These are proving to be very popular and customers are happy and excited with this new equipment.

Our continued relationship with Armorgard is proving fruitful for both parties. We have had a great response to the Formastor, and now we are purchasing some of the new FlexiKart model from them too. Working with Armorgard has been a pleasure and we look forward to continuing our relationship with them.

The Delta Deck is another one of M&E's most popular pieces of equipment, the benefit of this product is that it can be easily assembled by a single operator.

Construction Division

Over the past year our construction division, in addition to having the hire desks revamped have taken on multiple new pieces of equipment. We have added the 6,14 and 18 meter Manitou Telehandlers to our fleet as well as the 6, 9 and 14 meter JCB's too.

MT625

Optimised Dimensions

Designed with construction and renovation in mind, the MT625 has exceptional characteristics in terms of compactness when compared with other Telehandlers.

With a width and height less than 2m (1.81m x 1.92m), the MT625 moves easily in restricted spaces (in materials storage areas, on urban or confined sites, under low headroom entrances and underground car parks).

The manoeuvrability remains your main advantage !

The MT625 operates in places which would be inaccessible to other handling equipment thanks to the 4 wheel drive and all wheel-steering. One lever selects the various steering modes simply:

- 4-wheel steering for tight turning circles in confined spaces.
- Crab steering for side approaches and awkward clearances.
- 2 front wheel steering for driving on the road.

Construction Division

MT 1840

The MT 1840 Telehandler is specially designed for high bay/high rise work sites, with a lifting capacity of 4T up to and a max 18m in height. Equally at home on uneven terrain, it has a generous ground clearance and tight turning radius so maneuverability never becomes an issue. Additionally excellent lateral and front stability make it a reliable on-site partner.

Colebrook Royals

With only two league games remaining our sponsored team the Colebrook Royals have played 36 games in all competitions (League, Cup, & Friendlies)

| Played 36 | Won 31 | Drawn 2 | Lost 3 |

They've scored a total of 132 goals, conceding only 29 during the season. They have also been promoted two divisions. They recently travelled to Shanklin, Isle of Wight to compete in The Sports Tours Annual Tournament. They played 7 qualifying games winning 6 & drawing 1 which qualified them for the Final which they won 1-0 with the winning goal scored by Henry Burton who is 1 of the 2 children that our Operations Director Michael Burton has in the team.

Meet The Directors

Name: Martin Lawrence

Years with the company: 37

Email: martin.lawrence@mrplanthire.co.uk

Martin joined in 1982 as a partner with Dave. He was Finance Director and has recently moved into the role of Managing Director.

Name: Tony Crawford

Years with the company: 20

Email: tony.crawford@mrplanthire.co.uk

Tony Joined in 1999 as an Assistant Manager, became a field Salesman and then moved into the Powered Access division as a Manager, Director and more recently Sales, Marketing & Commercial Director.

Name: Michael Burton

Years with the company: 32

Email: michael.burton@mrplanthire.co.uk

Mick joined Mr Plant Hire PLC in 1987 as a Trainee Hire Controller, he then advanced to become Manager of the Mechanical & Electrical Division and has since moved on to become Operations Director.
